

STAFIX MONITORS

STAFIX ELECTRIC FENCE AND SECURITY CENTRES

REMOTE CONTROL
FENCE COMPASS

A 3-in-1 tool designed specifically for rapid location of faults on an electric fence. In addition to its built-in volt and current meters, it also includes remote control technology for long-distance energiser control.

- ★ On/Off switch enables user to turn off any Stafix Mains R series energiser on or off from anywhere on the fence line
- ★ Large back-lit LCD for use in all light conditions
- ★ Display shows the current, voltage and current direction simultaneously
- ★ Displays the previous current reading to compare values
- ★ Audible current indicator
- ★ Cordless design means no ground probe is required
- ★ Integrated belt clip with robust impact and water resistant case
- ★ Replaceable 9V battery, giving up to two years of trouble free use
- ★ Low battery warning system

FENCE COMPASS

A 2-in-1 tool designed specifically for the rapid location of faults on an electric fence.

- ★ Built-in volt and current meters
- ★ Easy to see in all light conditions, even in the dark
- ★ Easy to see which way the current is flowing
- ★ No need to change modes
- ★ Indicates current readings without your needing to look at the screen
- ★ Gives plenty of advance warning that the battery needs replacing
- ★ Caters for even the biggest energisers
- ★ Positive location gives more accurate and steady current readings
- ★ Can be used in all weather
- ★ Is made to withstand the agricultural environment
- ★ Commonly available battery that is easily replaced by the user

FENCE ALERT

A FenceAlert warning light should be placed on every electric fence that is passed during hours of darkness, especially alongside roads, driveways and around buildings. The FenceAlert provides an instant warning of low or intermittent voltages and guards against the risk of animals escaping.

- ★ The FenceAlert can be used on permanent and temporary fences
- ★ The tall clip allows the FenceAlert to be attached to fencing wire from Ø1.6 mm (16 gauge) to Ø4 mm (8 gauge), or electrified tape up to 40 mm

DIGITAL VOLT METERS

Highly accurate digital voltmeters for the most extensive fencing systems.

- ★ Essential for accurate testing of fence and energiser earth systems
- ★ Readings from 100V to 10,000V
- ★ Solid state circuitry designed for durability and rugged use
- ★ Automatic on/off
- ★ Replaceable 9V battery with a life of 12-18 months
- ★ Large clips for attaching to the live wire and earth contact

LITE TESTER

A Handy, pocket-sized unit for testing general fence condition.

- ★ Shows if fence is live and measures voltage
- ★ Increments from 2,000V to 6,000V
- ★ Bright voltage lights and easy to read voltage markings

ENERGISER
PERFORMANCE
METER

The Energiser Performance Meter (EPM) measures the peak output voltage and pulse energy delivered to a connected load by a pulse type electric fence energiser. This information is displayed in the form of:

- ★ **kV:** The peak output voltage delivered to the connected load
- ★ **Joules:** The amount of energy each pulse delivers to the load

The EPM also measures and displays:

- ★ Pulse interval in seconds
- ★ Pulse width in milliseconds

Applications include:

- ★ To evaluate the performance of a battery or mains pulse type energiser under various load conditions
- ★ To allow service technicians to carry out performance checks on pulse type energiser units during maintenance

NDLOVU MONITORS

STAFIX ELECTRIC FENCE AND SECURITY CENTRES

JVA
FAULT FINDER

- ★ Waterproof and impact resistant case
- ★ Simple to use, one touch operation
- ★ Clearly indicates the direction of the fault
- ★ Leads you quickly to the fault in the fence
- ★ Digital readings show the voltage and current
- ★ No wires or clips means no tangle or shocks
- ★ Low battery indicator
- ★ Uses a standard 9V battery

RK 250 RK 350
FENCE MONITORS

RK 250 High Voltage Independent Fence Monitor.
RK 350 Low Voltage Independent Fence Earth Monitor.

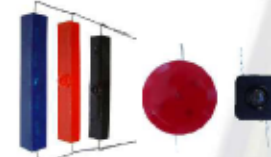

- ★ The units operate from 12V and can be added into an existing energiser system to monitor fence breaches
- ★ The system has a siren and strobe output and adjustments for changing the trigger voltage

LE CAD
ELECTRIC FENCE
AND GATE MONITOR

An all-in-one high voltage and gate alarm monitor.

- ★ Isolated high voltage input
- ★ Auxiliary or gate sensing input
- ★ Audible alarm through external sign and internal buzzer
- ★ Visible indicators – power, pulse, alarm, status
- ★ Strobe light output
- ★ External outputs are fuse protected
- ★ Arms/disarms by a single switch
- ★ Alarm conditions for: high voltage failure, Aux/gate, low battery
- ★ Programmable output controls and timing via a single button

FENCE FLASHING LIGHTS

An inexpensive & simple flashing LED that connects to your fence between live & earth.

- ★ The LED will flash each time the energiser pulses
- ★ The LED is clearly visible at night only
- ★ Blue visible from all sides as a faint blue glow at night
- ★ Red visible from all sides as a faint pink glow at night
- ★ Black visible from one angle only as a red glow at night

ZONE SPLITTER BOX

The Zone Splitter Boxes are custom made for any Stafix 6, 12, 18 or 36 Joule Energisers.

- ★ They are used to split a single energiser into 2/4/6 or 8 separate zones
- ★ The resistors inside the Splitter Box prevent a short on one zone from dropping the voltage on other sectors of the fence

RADIO TELEPHONE SYSTEMS (Walkie Talkies)

Stafix Electric Fence & Security Centres stock a simple, robust, rechargeable radio telephone system, ideal for communicating freely on long fence lines. The radios have a range of up to 5km and up to 8 channels giving you over 300 privacy combinations.
